

SOM TRACK SPLIT RINGS! OGM T-SR # 3~ # 10

Thanks to all of your positive feedback on our OceanSnap series of snaps, we have decided to move into the split ring market as well.

We are pleased to announce our all new 「Track Split Rings」 ! Knowing that split rings are a key component to landing large fish we have went back to the drawing board with our series of split rings.

- First, We have used a stronger material (NAS301H Stainless steel) than has ever been used on any split ring before.
- Secondly, we have changed the form of our rings from the standard round shape to a more "track" style design.

■ Merit of ring design

1) While under maximum stress, the long shape of the rings helps to reduce fatigue by always keeping 2 wires against the hook.

2) While replacing bent out hooks etc; these rings will always return to their original form. No more stretched rings !
